POLARIN DATA POLICY

All digital research data and outputs resulting from POLARIN Transnational Access will be managed in accordance with the general POLARIN Data Policy, which adheres to the FAIR principles. Applying these principles ensures that research data is Findable, Accessible, Interoperable, and Reusable throughout the entire data lifecycle, and helps to maximize the project's data outcomes and use of the data beyond its lifetime.

The User Groups granted POLARIN TA must comply with the POLARIN Data Policy and agree to publish their data in a trusted repository the latest within 24 months from the completion of their access and provide the DOI or relevant persistent identifier of the dataset in POLARIN TAP.

POLARIN advocates for adopting the Creative Commons framework and using the CC BY 4.0 license for digital data wherever possible. An embargo period of maximum 24 months is allowed, during which access to a dataset is temporarily restricted. Requests from external users for data access during the embargo period will be forwarded to the data originators for their decision.

Metadata should be made available under the CC0 license as soon as possible. The trusted data repository where the data will be published should be specified in the metadata. Once the data is ready to be made publicly available, the metadata should also include a Persistent Identifier (e.g. a DOI).

The information on published metadata and datasets must be provided by the TA User Group leader in POLARIN TAP.
